

Düker SML-seaside

Excellent and durable resistance
for seaside applications

Available now: Düker SML-seaside pipe system

The new Düker SML-seaside pipe system responds exactly to the requirements of project investors and designers in coastal areas: a drainage pipe system which is resistant to seaside atmospheres and high humidity – while offering an economic solution for installation in outdoor atmosphere.

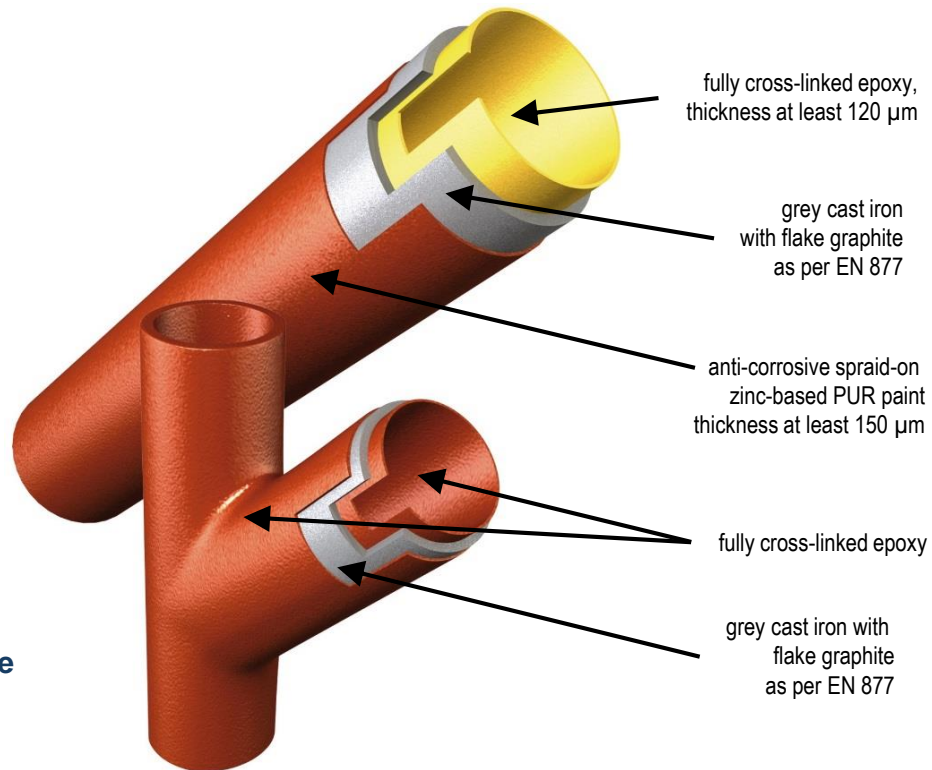

Superior Coating Outside – Because That's Where it Counts

Düker SML-seaside pipes bear a high-quality, fully cross-linked epoxy coating inside, identical to the proven SML pipe coating.

On the outside, SML-seaside pipes are protected with a high-quality zinc-based PUR paint in reddish brown colour which is suitable for outdoor and seaside applications.

This coating consists of two layers and does not require an additional on-site painting even in case of outdoor installation.

Düker SML-seaside pipes are in accordance with the European Standard EN 877.

Suitable Fittings? No Problem!

SML-seaside pipes are installed with the usual SML fittings. These fittings bear a fully cross-linked epoxy coating in the same reddish brown colour, inside and outside.

Product Range

SML-seaside pipes and SML fittings are available in DN 50 up to DN 400.
